Professional Summary

Software Engineer with 1+ year of experience in **application development**, **data management**, and **AI-powered automation**. Experienced in building **scalable full-stack and backend applications** using Python, JavaScript/TypeScript, React, Node.js, FastAPI, and SQL, with hands-on experience in Azure OpenAI, Azure AI Foundry, LangChain, LangGraph, RAG, and multi-agent systems. Built CMS migration, data-quality, Text-to-SQL, and full-stack systems with measurable improvements in **efficiency**, **productivity**, **retrieval accuracy**, and **processing time**.

Experience

Contentstack **Jan 2026 – Aug 2026**

Associate Software Engineer | *Experience Letter* *Mumbai, Maharashtra*

- Developed and enhanced internal engineering platforms and migration tooling to improve engineering productivity and automate CMS workflows.
- Built and improved content migration workflows involving extraction, transformation, validation, and loading across CMS environments.

Associate Software Engineering Intern | *Experience Letter* **Jan 2026 – Jul 2026**

- Developed the **Solution Library**, an internal engineering platform that centralizes reusable solutions and implementation knowledge, improving solution discovery and engineering productivity by **30%+**.
- Built and enhanced the **SAP SmartEdit Connector** to automate and streamline content migration workflows, supporting content extraction, transformation, validation, and loading across CMS environments.
- Developed **CS-to-CS**, an internal migration tool for moving content between Contentstack stacks across different organizations and regions, automating migration workflows and reducing manual effort.

Aspiring Media Tech | **Certificate** **June 2024 – Dec 2024**

Web Developer Intern *Vasai, Maharashtra*

- Built and optimized a **full-stack campaign tracking platform**, improving overall system performance by **30%** through application optimization and efficient backend workflows.
- Implemented an **AI-powered metadata enrichment and NLP-based auto-tagging pipeline** using SQL and Hugging Face Transformers, improving search efficiency by **40%** and automating campaign-content classification.

Projects

Solution Library | *Application Development, Data Management, AI* | *Contentstack* **2026**

- Developed an internal **Solution Library** to centralize and organize reusable engineering solutions and implementation knowledge, improving solution discovery and engineering productivity by **30%+**.
- Built application workflows for solution creation, organization, discovery, and reuse, enabling engineers to access previously developed solutions and reducing duplicated implementation effort across teams.

DailyOS | *Next.js, TypeScript, Firebase, Groq, NextAuth* | GitHub | Live Demo **2026**

- Built a full-stack personal operating system using **Next.js 14**, **TypeScript**, and **Firebase**, integrating task management, workout tracking, nutrition logging, health-data synchronization, and automated push notifications through **14 serverless API routes**.
- Developed **AI-powered coaching and automation** using Groq-hosted LLaMA and Whisper models, including context-aware productivity, workout, and nutrition assistance, multimodal meal analysis, voice-based logging, and AI-generated daily summaries.

SAP SmartEdit Connector | *JavaScript, APIs, CMS Migration, Data Transformation* | *Contentstack* **2026**

- Built and enhanced the **SAP SmartEdit Connector** to streamline CMS content migration by automating content extraction, transformation, validation, and loading across migration workflows.
- Developed reusable migration logic and validation workflows to improve data consistency and reduce manual intervention across **7+ migration workflows and 10,000+ content entries**.

CS-to-CS Migration Tool | *Contentstack APIs, Data Migration, REST APIs* | *Contentstack* **2026**

- Developed **CS-to-CS**, an internal migration tool for transferring content between Contentstack stacks across different organizations and regions, automating cross-stack migration workflows.
- Implemented migration and validation workflows for reliable content transfer, reducing manual migration effort across **20+ stacks and 20,000+ content entries** while maintaining data integrity.

WhatsApp Campaign Management System | *JavaScript, PHP, Cron Jobs* | *Aspiring Media Tech* **2024**

- Built and optimized a **full-stack WhatsApp campaign management and tracking platform**, improving overall system performance by **30%** through application and workflow optimization.
- Implemented an **AI-powered metadata enrichment and auto-tagging pipeline** to automate campaign-content classification, improving **search efficiency by 40%** and enabling faster campaign discovery.

Arrhythmia Detection using 1D CNN | *Python, TensorFlow/Keras, ECG Data Preprocessing* | GitHub **Jul 2025**

- Developed a 1D Convolutional Neural Network (CNN) model for real-time arrhythmia detection, achieving **94.5% accuracy** and **95% sensitivity** on ECG datasets.
- Optimized model architecture and hyperparameters, resulting in a **30% reduction in inference time**, making the model suitable for edge deployment.

Education

University of Mumbai **Jul 2022 – Jun 2026**

Bachelor of Engineering in Computer Science *CGPA: 8.55 / 10*

- **Relevant Coursework:** Data Structures & Algorithms, Operating Systems, Computer Networks, Database Management Systems, Object-Oriented Programming, Machine Learning

Technical Skills

Programming Languages: Python, JavaScript, TypeScript, Java, C++, SQL

Application Development: React.js, Node.js, Express.js, FastAPI, REST APIs, GraphQL, HTML, CSS, Git, GitHub, Postman

AI / Agentic AI: Generative AI, Large Language Models (LLMs), Natural Language Processing (NLP), Retrieval-Augmented Generation (RAG), Agentic AI, Multi-Agent Systems, Prompt Engineering, LangChain, LangGraph, Semantic Kernel

Data Management: PostgreSQL, MySQL, MongoDB, SQL Server, Redis, Data Migration, Data Transformation, Data Validation

Azure & Cloud: Microsoft Azure, Azure OpenAI, Azure AI Foundry, Azure AI Search, AWS, Docker, CI/CD

Software Engineering: Data Structures & Algorithms, Object-Oriented Programming, Database Management Systems, Operating Systems, Computer Networks, SDLC, Agile/Scrum, Debugging, Code Reviews, Automation Testing

Certifications and Learning

- **Data Structures and Algorithms using Java** – Infosys Springboard, 2024
- **Full Stack Web Development - Skill Up** – GeeksforGeeks
- **Namaste React** – NamasteDev
- **Namaste Node.js** – NamasteDev

Extracurricular

- Solved 750+ questions on LeetCode and 550+ on GFG, demonstrating strong problem-solving skills.
- Served as a core member of NSS (National Service Scheme), VCET, contributing to multiple social impact initiatives.
